

Looking for the Secret to Intelligent Well Systems™ Value?

Natural reservoir depletion caused this ESP-lifted well's production to decline from 4,000 bpd to 3,000 bpd. Retrofitting with an InForce System allowed the operator to monitor and control each zone independently and more than double production, to 6,500 bpd.

We have the answer

The real value of Intelligent Well Systems extends beyond high-OPEX deepwater fields to lower-OPEX mature and marginal fields, and beyond intervention to reservoir productivity and reserves recovery. Baker Oil Tools' InForce™ System works compatibly with ESPs, Multilaterals and conventional sand control completion systems to bring the value of Intelligent Well Systems to all kinds of fields. Contact us today to see how Intelligent Well Systems can bring value to your operations. www.intelligentwells.com
