

Hyper™ ISP Rotational Release

Hyper™ Inflation Service Packer (ISP)

Baker Oil Tools combines the industry-leading Production Injection Packer (PIP™) and Thru-Tubing Inflation technologies to create Hyper™ ISP:

A unique new tool with greater differential pressure capability, slim profile, larger expansion ratio, and versions for H₂S and acid service.

Baker Oil Tools created Hyper™ ISP by joining a modified PIP™ chassis with a high-performance thru-tubing inflatable (TTI) element. The result of combining these two industry-leading downhole technologies is a line of inflatable service packers unlike any other tool.

Hyper ISP is ideal for zone isolation in open hole or casing, particularly where planned or unplanned downhole restrictions are present. Hyper ISP combines a slim profile and a large expansion ratio with a significantly higher differential-pressure handling capability. It is available with the greatest range of element configurations of any ISP. This includes elements for acid and H₂S service.

With such a large number of tool variations, and a greater performance envelope within each variation, Hyper ISP provides a wider range of “fit for purpose” solutions than any other inflatable tool.

Hyper™ ISP gives you important benefits over ordinary inflatable tools:

- Integration of a thru-tubing-style element provides greater pressure, draw-down, and expansion capabilities.
- Availability of H₂S and acid-service elements increases the range of wellbore operating conditions.
- Material upgrades and improved mechanical specifications enhance performance.
- Available H₂S service chassis provides intermediate-term packer solutions in H₂S environments.
- Optional pull-release capability increases reliability in horizontal or coiled-tubing installations.
- Compatibility with Baker Oil Tools PIP accessory tools enables solutions across a wide range of applications.

Another key advantage of Hyper™ ISP:

Is it's from Baker Oil Tools, it gives you several more unique benefits:

- Quality Field Assurance - To give you the maximum benefit before, during, and after the job. Baker Oil Tools' QFA is backed by the global resources of Baker Hughes Incorporated.
- Highest reliability - The result of rigorous testing in dedicated, state-of-the-art ISO 9001 facilities.
- Unsurpassed experience and expertise - From the world leader in inflatable technology for oilfield applications.

Hyper ISP is ready to work for you now. For more information, contact your nearest Baker Oil Tools representative today or visit us at www.inflatepackers.com or e-mail us at inflatable.systems@bakeroiltools.com.
